

Door Automation

Whether a new or existing door, AST Ltd can provide a range of automation solutions to meet your requirements. Our specialist and highly trained engineers are able to fit door automation to almost any door, swing or sliding, in almost any material including Wood, Aluminium, Steel and UPVC.

We install strong and robust automatic door motors that are designed to be durable, requiring minimal maintenance, making them suitable for both busy communal entrances and residential applications.

Services provided by AST Ltd

- Consult on design installation, assisting you to identify the most suitable solution to meet your requirements
- Install automation to new and existing doors.
- Maintain and service existing automated doors to prevent failure and extend the life of automatic door motors
- We are able to automate doors to operate via remotes, key fobs, push button or infra-red sensors
- Door automation solutions can be integrated into your existing access control or door entry systems
